ABOUT ME

Motorsport engineering student specialising in automotive performance, with hands-on experience in Driver-in-the-Loop, and data analysis. Multilingual, detail-oriented, and eager to contribute to high-performance environments through a 6 months internship in vehicle dynamics and simulation in endurance motorsports (WEC / IMSA)

KEY SKILLS

- **Simulation & Analysis** : DIL Operation (Cruden Panthera), Vehicle dynamics (Matlab/Simulink), CFD (Ansys Fluent), Racing data analysis (MoTec, WinTax, OneRaceHub, Alfano)
- **CAD and Design** : SolidWorks, 3DEXperience, Carbon fibre manufacturing
- **Programming** : Matlab, C, C++, Python, HTML-JS, Markdown, VBA
- **Electronics and Powertrain** : ECU Simulation (CANoe), EV Powertrain integration
- **Languages** : French (Native), English (C1), Spanish (B2), Portuguese (B2), German (B1).

RELEVANT EXPERIENCE

Driver in the Loop developpment engineer – AOTech

Saint-Pierre-Du-Perray, May 2026 – September 2027

- Created and implemented driving analysis tools for race engineers to accelerate sim prep reviews
- Assisted Alpine Racing and Michelin Motorsport on model development and race preparation days
- Upgraded wet modelisation on Le Mans to teach rookie drivers wetlines on track
- Built hardware upgrades for the GT3 DiL chassis (steering column, rearview mirrors...)
- Trained Alpine Racing drivers for marshalling procedures on Le Mans, acheiving zero SZ, FCY or SC penalties over the course of the race

Race and data engineer – ESTACA Motorsports

Montigny-Le-Bretonneux, September 2022 – April 2026

- Followed Lara FELIX (11 y.o.) and Aaron FELIX (9 y.o.) on their rookie karting season in National and Mini60
- Realised data-driver setup adjustment and coaching, gaining up to 1.7s over the course of a weekend
- Vulgarised technical terms and adapted vocabulary to explain driving concept for kids
- Went from a P24 average to a P13 average across one season (6 meetings)

Engine tests wear analyst – HORSE Powertrains

Valladolid, July 2024 – September 2024

- Developed engine testing protocols for Renault Rafale, Renault Austral, Dacia Sandero.
- Analyzed ICE parts post-bench test to detect fatigue or failure against reliability specs.
- Monitored engine data (temps, pressures, fuel, electronics) to predict and prevent failures.

PERSONAL PROJECTS

President – ESTACA Motorsport

Montigny-Le-Bretonneux, February 2025 – Present

- Managed France's largest student motorsport club currently counting 116 active members.
- Coordinated events, technical projects, doubled industrial partnerships (ART GP, Kawasaki, ORECA...)

Laptime Simulator – Independent

Guyancourt, August 2025 – Present

- Currently building a fully fonctionnal "optimal laptime calculator" on Matlab, to find optimum car setups.

FORMATION

4th year of automotive engineering school – ESTACA Campus Paris Saclay

St-Quentin-en-Yvelines

September 2022 – May 2028

French high-school degree – Lycée Alexandre Dumas

Moscow

January 2020 – July 2022
